

# Mechanical temperature switch

With bimetallic disc inside the stem

## Description

These temperature switches are designed for use in rough industrial environment. Due to the used bimetallic disc technology and a special build-up of the switches, they are suitable for applications with high vibrations.

There are standard models available with plug connector acc. to DIN EN 175301-803, in brass as well as in stainless steel. The certain electrical connections allow a quick installation of the switch. The ingress protection corresponds up to IP66/67, when the plugs are connected.

Bimetals are the basis of these temperature switches. The sensing of the temperature results from a bimetal disc, which is inside the stem. This disc snaps over, if the defined switching temperature is reached. As switching function, there are available NC (Normally Closed) and NO (Normally Open). After cooling down to the reset switching point (hysteresis usually 30K), the switch returns to its initial state. As the bimetal disc is not carrying current, imprecise switching because of self-heating or arcing can be eliminated.

## Features

- O vibration proof
- O certain electrical connections
- O snap action contact, non-current-carrying
- O available as NO or NC
- O up to IP66/67
- O customer specific geometries

#### Switch ranges

- O factory set switching point
- O +40 .. +200 °C
- O available in 5K interval

## Applications

- O compressors
- O motors
- O gear boxes
- O mobile hydraulics
- O machine building

# **Technical Data**

	Mechanical temperature switch
Model	S6410
Process connection	30410
Frocess connection	G1/2
	G1/2 G1/4
	G3/8
	M14x1,5
	M22x1,5
	1/2 NPT
	1/4 NPT
<b>D</b> '	Others on request
Diameter	40
Standard	10mm
Optional	Others on request
Insertion length	
	28mm
	40 mm
	50 mm
	60 mm
	100 mm
	Others on request
Measuring principle	
	Bimetalic disc, snap action contact
Material	
Standard	brass
Optional	stainless steel1.4305; Others on request
Switching point	
Quantity	1 (optional 2 in combination with L-plug or M12x1, circular connector)
Function	Normally Closed (NC) / Normally Open (NO)
Temperature	+40 +200 °C ; with 5 K interval
Adjustment	Factory set switching point
Hysteresis	typical 30K (dependent of the switching temperature)
Switch rating	
DC 12V	4A
24V	3A
AC 115 V	3A
250 V	2A
230 V	Optional: up to 10A
Contact resistance	$< 50 \text{ m}\Omega$
Dielectric strength	AC 1500V /1min. between the switch and the housing
Switching cycles	Min. 10000 cycles
	-50 +125°C
Ambient temperature	
	At high temperatures and short insertion lengths special attention has to be paid to the
	maximum temperature of the connector.
Electrical connection	L plug ago to DIN EN 175201 902
Standard	L-plug acc. to DIN EN 175301-803
Ortional	FAST-On flat connector 6,3x0,8mm
Optional	FAST-On flat connector 4,8x0,8mm
	Plug connector, AMP Junior Power Timer
	M12x1, circular connector
	Deutsch connector DT04-2P
	Bayonet connector DIN72585
Ingress protection	Up to IP66/67 if connected acc. to DIN EN 60529 / IEC 529,
	(dependent on the electrical connection)
Vibration resistance	Up to 10g, depends on the geometry, material and medium
Shock resistance	Up to 500g, depends on the geometry, material and medium
Pressure rating	Max. 100 bar,
5	Optional: up to 600 bar, depends on the geometry, material and medium

#### Dimensions

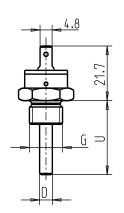

#### FAST-ON flat connector 6,3x0,8mm
