Omega® HDB Series heated dry baths provide a safe, dry, constant temperature source in laboratory applications involving incubation, boiling, inactivation, wet ashing, and enzyme analysis, as well as in a variety of clinical and industrial applications.

Interchangeable aluminum insert blocks accept tubes or containers ranging from 6 to 26 mm in diameter. A close fit of the tubes in the block ensures high heat transfer, and the heater's design, thermistor temperature sensor, and solid state circuitry provide exceptionally good temperature stability and uniformity. Temperature stability is  $\pm 0.1^\circ\text{C}$ , and uniformity between blocks is  $\pm 0.2^\circ\text{C}$  (both at  $40^\circ\text{C}$ ).

On the HDB-2 and HDB-3, temperatures are adjusted with a dial calibrated in  $^\circ\text{C}$ . On the HDB-3D, the dial and digital display are used to set the temperature. The digital indicator continuously displays the temperature.

A block extraction tool, and threaded fitting built into the block, allow easy removal. The user can also insert glass thermometers into the block for accurate temperature measurement.
